Substantive Knowledge						
EYFS	One	Two	Three	Four	Five	Six
Know that the internet / online can be used to communicate.	Know that I should ask permission before going online.  Know that there are different ways people can communicate online.	Know that I should ask permission before sharing information online.  Know that Strangers could communicate with me online, and this could be dangerous.  Know that I have the right to say 'No'.	Know that people with similar interests get together online.  Know that I can change my mind about trusting someone online.  Know that people can be upset by what they experience online.	Know that I need to be respectful online.  Know that there are good and bad ways to behave online.  Know that people feel differently about the same information.	Know that there are technology specific forms of communication. (memes / emojis).  Know that there are some types of harm that people may want to do to me online.  Know that 'It's not my fault'	Know that sharing content of have positive and negative consequences.  Know that anything I post online could, or can be, shar by someone else.  Know that sharing inappropriate things online could have a serious impact on me, and the person the content relates to.
Disciplinary Knowledge	?					
EYFS	One	Two	Three	Four	Five	Six
Know some ways I can use the internet to talk to people I know (Facetime / WhatsApp)	Know when I need to ask permission to go online.  Know why I need to ask permission.  Know ways to use the internet to communicate with people I know.  Know why it is important to be considerate and kind online.  Know how people can view things they see differently online.	Know why I should ask before sharing things about myself or others.  Know some ways people can communicate with people they do not know and why this might hold risks.  Know different ways I can ask for, give, or deny my permissions online.  Know why I have the right to say No.  Know who can help me if something happens without my consent.  Know I need to ask for others permission before sharing something about them online.  Know why I should ask a trusted adult before clicking 'yes' I 'agree' I or accept' online.	Know how people with similar interests can get together online.  Know how knowing someone offline and online can be different.  Know how 'trusting' and 'liking' someone online is different.  Know why people might change their mind about trusting someone online.  Know how someone's feelings can be hurt by what is written I posted online.  Know the importance of giving or gaining permission before sharing online.	Know how different strategies for safe and fun experiences in online social environments can be used.  Know examples of how to be respectful online and know healthy and unhealthy behaviours.  Know how shared content may feel unimportant to one person, but important to others.	Know how and when it's appropriate to use technology specific forms of communication like emojis, memes, gifs.  Know some people I communicate with online may want to do me or my friend's harm. Know this is not my fault.  Know how people can be in online communities and describe how they might collaborate and make positive contributions.  Know how someone can get help and when to tell a trusted adult.  Know how I can support others who are having difficulties online.	Know how sharing somethin online may have a positive or negative impact.  Know how to support people online and respect boundarie.  Know ways in which things shared privately online can have unintended consequence (screengrabs).  Know that taking and/sharin inappropriate images may have an impact for the share and others.  Know what to do and how thelp if someone is worried about shared content.

for content I use.	opyright & Ownership - K	know that ownership of (	online content is importar	it. Know how to protect i	my own content and cred	lit or seek permission
Substantive Knowledge						
EYFS	One	Two	Three	Four	Five	Six
Know that work I create belongs to me.	Know that other people's work does not belong to me. Know that the digital work I create belongs to me.	Know that content on the internet belongs to other people.  Know ways in which other people's work online belongs to them.	Know that copying people's work from the internet is not lawful.  Know copying other people's work without their permission may cause problems.	Know that I need to consider other people when I use their work.  Know that there are types of work I must not use without the owner's permission (Video. Music)	Know that there are types of content that is permitted to be reused.  Know about the Creative Commons and Copyright Act	Know that there are different kinds of copyright and these are protected by law.
Disciplinary Knowledge						
EYFS	One	Two	Three	Four	Five	Six
Know how to put my name on my work so others know it belongs to me.	Know how to say: 'I created it' or 'I designed it'.  Know how to save my work with a suitable file name.		Know how to protect my own content.  Know how to use Footers / Headers to name and date work.	Know how to add citations and reference to other people's work that I might use.	Know how to assess and justify when it is acceptable to use the work of others.  Know how to find useable content online.	Know how to use search tools to find content that can be seen by others.  Know how to use headers, footers and citations to, and in acknowledgementof work and sources I have used.

DIGITAL LITERACY: Online Reputation – Know that others make judgements about my reputation by what they view online. Know that information that's placed online stays there forever. Substantive Knowledge **EYFS** Two Three Five Six Four Know that information can be Know that information can Know that information placed Know that information about Know that online information Know that people make Know that a positive online put online in different ways. stay online and be copied. online can be there for a long judgments about other people reputation is worth having people can be searched for about you can be created, from what they see online. online. copied, and shared. and looking after. Disciplinary Knowledge **EYFS** One Two Three Four Five Six Know what information I Know and describe how to Know how to search for Know ways that I can develop Know how information can be Know who to talk to if Know how to search for put on the internet in different should, and should not, put something has been put online information about others individuals' information online and maintain a positive online find information about others without consent, or if it is by searching online. and summarise the findings. ways. reputation. Know when to ask a trusted Know how and why people Know how online information Know that information online Know how to protect my adult before putting are willing to share online. about a person can be used to digital personality and online about someone could be information online. created, copied, or shared. make judgments about the reputation. Know how to be careful person and these may not be before sharing anything correct or true. Know how and when to use personal. degrees of anonymity. Know who I can ask if someone is unsure about putting information online.

DIGITAL LITERACY: Privacy & Security - Know how personal online information can be used, shared, stored, and processed. Know how to protect privacy, systems and

Substantive Knowledge	2					
EYFS	One	Two	Three	Four	Five	Six
Know that parents might share things about me online.	Know that passwords are used to protect information, accounts, and devices. Know that I have a school account and password.	Know that personal information is private.  Know that I probably have devices at home that connect to the internet.	Know that secure passwords have combinations of characters and words.	Know that going online is never completely private.  Know that I must be 13 before I can give my consent online.  Know that the Data Protection Act and GDPR regulations exist.	Know that free Apps / Apps may read and share my private information with others.  Know that Apps, software and devices should be kept up to date.  Know the relevant plinciples of the Data Protection Act and GDPR Regulations	Know that passwords should be changed regularly.  Know that reputable Apps & Services I use have terms and conditions which govern how should use them.  Know the plinciples of the Data Protection Act and GDPR Regulations
Disciplinary Knowledge	2					I.
EYFS	One	Two	Three	Four	Five	Six
Know some of my own personal information.  Know who I could tell this information to safely.	Know some more detailed examples of personal information such as school or family name.  Know how to keep my password safe.  Know why it is important to ask a trusted adult before sharing information online.	Know what is meant by 'private' and 'keeping things private'.  Know how to keep my personal information private. (Making passwords and keeping them secret).  Know why and how devices at home are connected to the internet.	Know how to create a secure password and keep it private.  Know some reasons how and why people should only share information with people they choose and trust.  Know how connected devices can collect and share data.	Know that when I use the internet it is never completely private, and it can be monitored.  Know that some online services may seek consent to store or use my personal data.  Know who to ask before agreeing to data consent online.  Know what the digital age of consent is and how this can impact which services ask for consent	Know what App permissions are and give examples from the Apps I might use.  Know how online content can target people to gain money or information illegally.  (Spam, Phishing)  Know how to keep software and Apps up to date.	Know how to effectively manage passwords.  Know how to act if a password is shared, lost, or stolen.  Know how to increase privacy on Apps and service that I use.

**DIGITAL LITERACY: Managing Online Information** – Know how information is found, viewed, and interpreted. Know how to critically evaluate between fact and fake. Know how to recognise and deal with threats. (Monoxide (dhmo.org)) & (www.whiteboardblog.co.uk)

Substantive I	Knowledge					
EYFS	One	Two	Three	Four	Five	Six
Know that some devices I could use can access the internet.  Know that I can use the internet as a way of finding out information.	Know that online search engines help me find information.  Know that I might see things I don't like online.  Know that I can tell a trusted adult if I see something that upsets me.	Know that using key words in search engines get better results.  Know that replies from Voice activated devices are not a real person.  Know that information I see online may not be true.	Know that key Phrases and using punctuation will give better search results.  Know that the internet can be used to buy and sell things.  Know that there is a difference between 'belief', 'opinion' and 'fact' online.	Know that I should make my own decisions about information I experience.  Know that there are different ways I might be persuaded to buy things online.  Know that just because something is very popular or goes viral, doesn't mean it's true	Know that different search technologies have different benefits and limitations.  Know that the internet can take us to different information with different agendas.	be influenced & manipulated by people online or by design. Know that there are ways I can deal with online threats.

### INFORMATION TECHNOLOGY: Digital Drawing & Painting. — to be taught within other units

EYFS - Children recognise that a range of technology is used in places such as homes and schools. They select and use technology for purposes.

NC - KS1 - use technology purposefully to create, organise, store, manipulate and retrieve digital content.

NC — KS2 - select, use and combine a variety of software (including internet services) on a range of digital devices to design and create a range of programs, systems and content that accomplish given goals, including collecting, analysing, evaluating and presenting data and information.

	ing confecting, unangsing, evaluar	tin g and presenting data and in	Jorniation.		
Substantive Knowledge	-	1 =		F.	C:
One	Two	Three	Four	Five	Six
Know that digital drawing and painting involves creating artwork using electronic devices like iPads and computers. Know that basic tools in PurpleMash 2 Paint and Windows Paint, such as selecting colors, using brushes, and drawing simple shapes, are used for creating digital art.	Know that different brush sizes and types can be used in digital drawing and painting to create various effects.  Know that the undo and redo functions in PurpleMash 2 Paint and Windows Paint can help correct mistakes.  Know that saving and retrieving digital artwork on iPads and computers is essential for preserving and accessing their creations.	Know that more complex shapes and objects can be created in PurpleMash 2 Paint and Windows Paint to enhance digital artwork. Know that layers can be used to organize elements and facilitate easy editing in their digital artwork. Know that basic image editing tools like cropping and resizing can be employed to refine and improve digital artwork.	Know that different brush effects, such as transparency and texture, can be applied in digital drawing and painting to add depth and detail to their artwork.  Know that different color palettes and gradients can be utilized to create visually appealing compositions.  Know that combining and arranging multiple images or elements in PurpleMash 2 Paint and Windows Paint can result in collages or unique compositions.	Know that shading and highlights can be incorporated to create a sense of volume and three-dimensionality in their digital artwork.  Know that advanced tools like layer blending modes and filters can be used to achieve unique visual effects.  Know that exporting and sharing digital artwork in different file formats, such as JPEG or PNG, allows for easy sharing and presentation.	Know that digital artwork can be created with intricate details and advanced techniques using PurpleMash 2 Paint and Windows Paint.  Know that advanced selection tools can be employed to isolate specific areas or objects for editing or manipulation.  Know that critically analyzing and evaluating their own and others' digital artwork, considering elements such as composition, color choice, and storytelling, is important for artistic growth.
Disciplinary Knowledge	Т т	T1	F	F.	C:
One	Two	Three	Four	Five	Six
Know how to use drawing tools (pencil, brush, eraser) to create simple shapes and lines. Know how to draw basic objects and shapes. Know how to use different colors and experiment with filling shapes.	Know how to use the range of drawing tools available.  Know how to draw basic objects and shapes.  Know how to use different colors and tones and fill / draw the objects they create.	Know how to use brushes, textures, and effects to create more complex artwork.  Know how to Create drawings using basic shapes (circles, squares, triangles) and arrange them to form patterns and designs.  Know how to use different layers to add depth and detail to drawings.	Know how to use symmetry and create symmetrical drawings using digital tools. Incorporating patterns and shapes into larger compositions.  Know how to edit using techniques like resizing, cropping, and rotating drawings.  Know how to use digital tools to modify and enhance artwork, such as adjusting colors, adding filters, or applying special effects.	Know how to use the skills to draw and depict characters, both original creations and existing characters. Know how to create detailed backgrounds and scenes to tell visual stories or illustrate ideas.  Exploring collage techniques by combining different digital elements (images, textures, text) to create compositions.  Know how to use mixed media techniques, such as blending traditional drawing with digital elements.	Know how to organize and present artwork in a digital portfolio or presentation format.  Know how to share artwork with peers, teachers, or family members, both online and offline.

#### COMPUTER SCIENCE: Coding & Programming -

NC – KS1 understand what algorithms are; how they are implemented as programs on digital devices; and that programs execute by following precise and unambiguous instructions. Create and debug simple programs. Use logical reasoning to predict the behaviour of simple programs.

NC – KS2 design, write and debug programs that accomplish specific goals, including controlling or simulating physical systems; solve problems by decomposing them into smaller parts.

Use sequence, selection, and repetition in programs, work with variables and various forms of input and output. Use logical reasoning to explain how some simple algorithms work and to detect and correct errors in algorithms and programs

# Coding & Programming Key Vocabulary

- 1. Algorithm: An algorithm is a set of instructions or steps that tell a computer what to do to solve a problem or complete a task.
- 2. Repetition: Repetition means doing something over and over again.

In computer programs, it helps us repeat certain actions until we finish a task or reach a goal.

3. **Simple Selection:** Simple selection means making choices in a computer program.

It's like deciding what to do based on certain conditions or situations.

4. Logical Reasoning: Logical reasoning is about thinking and making smart decisions.

In computing, it means using logical rules and thinking carefully to solve problems and make the computer do what we want.

5. **Decomposition**: Decomposition is breaking a big problem into smaller, easier parts.

It helps us understand and solve complex tasks by taking them step by step.

6. Conditional Statements: Conditional statements are like "if-then" rules for computers.

They help the computer decide what to do based on certain conditions or situations.

7. Variables: Variables are like special containers that hold different types of information in a computer program.

We can change the information inside the containers as we go along.

8. Functions: Functions are like special tools or helpers that do specific jobs in a computer program.

They make our work easier by letting us reuse the same piece of code again and again.

# Computer Science Glossary

NB: Where key words repeat, the definitions are refined. These terms are to be used throughout the year. **Year One** 

- Algorithm: A step-by-step set of instructions or rules for solving a problem or completing a task.
- Debugging: Finding and fixing errors or mistakes in a computer program or activity.
- Code: Instructions or commands written in a programming language that tell a
  computer what to do.
- Input: Information or data entered into a computer or a device.
- Internet: A global network that connects computers and devices worldwide, allowing communication and access to information.
- Keyboard: A device with buttons or keys used to input letters, numbers, and commands into a computer.
- Output: Information, data, or results that a computer or device produces.
- Password: A secret combination of letters, numbers, or symbols used to access a computer, device, or online account.
- Programming: The process of writing and creating instructions (code) for a computer or device to do specific tasks.
- Software: Programs, applications, or instructions that run on a computer or device, allowing it to perform various functions.
- **Tablet**: A portable device with a touchscreen that allows users to access information, play games, and perform various tasks.
- Technology: The use of scientific knowledge for practical purposes
- Trackpad: An input device to control the on-screen cursor.
- **User:** A person who interacts with a computer, device, or software to perform tasks or access information.

#### Year Two

- Algorithm: A sequence of steps or instructions that solve a problem or complete a
  task.
- Binary: A number system that uses only two digits, 0 and 1, to represent data in computers.
- Hardware: The physical components of a computer system, such as the monitor, keyboard, mouse, and printer.
- Internet Safety: Rules, practices, and precautions to ensure safe and responsible use of the internet, including protecting personal information and avoiding online risks
- Keyboard Shortcuts: Key combinations that perform specific functions or commands, providing a quicker way to navigate and operate a computer or software.
- Programming Language: A set of rules and instructions used to write code that
  can be understood and executed by a computer.
- Search Engine: A software tool that allows users to search for information on the internet by entering keywords or phrases.
- Software Application (App): A program or collection of programs designed to perform specific tasks or functions, such as word processing, image editing, or playing games.
- Storage: The act of saving and retaining data or information in a computer system or external devices, such as hard drives or cloud storage.
- User Interface: The visual or graphical layout that allows users to interact with a
  computer or software, typically including menus, buttons, and icons.
- Virus: A type of malicious software or code that can replicate and infect computer systems, causing damage or disrupting normal operations.
- Web Browser: A software application used to access and view websites on the internet, such as Google Chrome, Mozilla Firefox, or Microsoft Edge.
- Website: A collection of web pages linked together and accessible through a
  unique address (URL) on the internet.

Page 22 of 25

#### Year Three

- Animation: The process of creating the illusion of motion by displaying a series of
  images or frames in quick succession.
- **Coding:** The process of writing instructions or commands in a programming language to create computer programs or software.
- Debugging: The process of identifying and fixing errors or bugs in a computer program.
- Digital Citizenship: The responsible and ethical use of technology and online resources, including understanding digital rights, privacy, and online behavior.
- HTML (Hypertext Markup Language): The standard markup language used for creating web pages and structuring content on the internet.
- Internet of Things (IoT): The network of physical devices, vehicles, appliances, and other objects embedded with sensors, software, and connectivity, allowing them to connect and exchange data.
- **Keyboarding**: The skill of typing on a keyboard accurately and efficiently.
- **Programming:** The act of writing instructions or code that enables computers to perform specific tasks or solve problems.
- Robotics: The branch of technology that deals with the design, construction, operation, and application of robots.
- Spreadsheet: A digital tool used to organize, analyze, and manipulate data in rows and columns.
- User Interface (UD: The visual and interactive elements that enable users to interact with computer systems or software.
- Video Editing: The process of modifying and rearranging video clips, adding
  effects, transitions, and audio to create a final edited video.
- Web Design: The process of creating and arranging the visual layout, structure, and content of websites.
- Word Processing: The creation, editing, and formatting of text documents using a computer program, such as Microsoft Word or Google Docs.

#### Year Four

- Binary Code: A coding system that uses a combination of Os and 1s to represent information in computers.
- Cybersecurity: Measures and practices to protect computer systems, networks, and data from unauthorized access, damage, or theft.
- Data Representation: The ways in which data is stored, organized, and represented in computers, such as binary, text, images, and sound.
- Debugging: The process of finding and fixing errors or bugs in computer programs or code.
- Encryption: The process of converting data into a secret code to prevent unauthorized access or tampering.
- Input Device: Hardware devices used to enter information or commands into a computer system, such as a keyboard, mouse, or touchscreen.
- Logic Gates: Basic building blocks of digital circuits that perform logical operations, such as AND, OR, and NOT.
- Network: A collection of computers and other devices connected to share resources and communicate with each other.
- Output Device: Hardware devices used to display or present information or results from a computer system, such as a monitor, printer, or speaker.
- **Programming Language:** A set of rules and syntax used to write instructions (code) for computers to perform specific tasks or operations.
- Search Engine: A software tool that allows users to search for information on the internet by entering keywords or queries.
- Spreadsheet: A digital tool used to organize, analyze, and manipulate data in rows and columns, commonly used for calculations and data management.
- User Interface (UD: The visual and interactive elements that enable users to interact with computer systems or software.
- Video Conferencing: Real-time audio and video communication between people in various locations using computer networks or the internet.
- Website Design: The process of planning, creating, and arranging the visual layout, structure, and content of websites.

#### Year Five

- Algorithm: A step-by-step procedure or set of rules to solve a problem or accomplish a specific task.
- Artificial Intelligence (AD: The development of computer systems capable of performing tasks that normally require human intelligence, such as speech recognition or decision-making.
- **Binary System**: A number system that uses only two digits, 0 and 1, to represent information and data in computing.
- **Coding:** The process of writing instructions or code in a programming language to create software, websites, or applications.
- Data Compression: The process of reducing the size of data files to save storage space or transmit data more efficiently.
- Database Management System (DBMS): Software that allows users to create, organize, and manage databases to store and retrieve data.
- Digital Citizenship: The responsible and ethical use of technology, including online behavior, digital etiquette, and understanding digital rights and responsibilities.
- Internet Protocol (IP): A set of rules that governs how data is sent and received over the internet.
- Machine Learning: A subset of artificial intelligence where computer systems learn and improve from experience or data without explicit programming.
- Network Security: Measures and practices to protect computer networks and data from unauthorized access, attacks, or vulnerabilities.
- Programming Language: A formal language used to write instructions or code for computer programs.
- Robotics: The interdisciplinary field involving the design, construction, and operation of robots.
- Virtual Reality (VR): An interactive and immersive experience generated by a
  computer, simulating a three-dimensional environment that can be explored and
  interacted with.
- Web Development: The process of designing, creating, and maintaining websites, including aspects such as web design, coding, and content management.

 Web Hosting: The service that allows individuals or organizations to make their websites accessible and available on the internet.

#### Year Six

- Binary Code: A coding system that represents information using a combination of 0s and 1s.
- Cybersecurity: The practice of protecting computer systems, networks, and data from unauthorized access, attacks, or damage.
- Encryption: The process of converting data into a secret code to ensure its confidentiality and security.
- HTML (Hypertext Markup Language): The standard markup language used for creating web pages and structuring content on the internet.
- Internet of Things (IoT): The network of physical objects embedded with sensors, software, and connectivity, enabling them to exchange data and interact with the internet.
- Network Topology: The arrangement or structure of a computer network, including how devices are connected and how data flows between them.
- Programming Language: A formal language used to write instructions or code that computers can understand and execute.
- Responsive Web Design: Designing websites to adapt and display
  optimally across different devices and screen sizes, such as desktops,
  tablets, and mobile phones.
- **Search Engine Optimization (SEO):** The process of optimizing a website to improve its visibility and ranking in search engine results.
- Spreadsheet: A digital tool used to organize, calculate, and analyze data in rows and columns, commonly used for budgeting, data analysis, and mathematical calculations.
- User Experience (UX): The overall experience and satisfaction a user has when interacting with a website, application, or digital product.

• **Virtual Reality (VR):** An immersive technology that creates a simulated environment, allowing users to interact and engage with a computergenerated world.
